

# WEEKLY PROGRESS REPORT

## Python Internship – Weekly Progress Report

### Submitted By

**Name:** Siddhnath Prajapati

**Domain:** Python Programming

**Date of submission:** 08/03/2026

**Week Ending:** 02

## 1. Overview

During the second week of the internship, the primary focus was on learning and implementing **Conditional Statements in Python**. Conditional statements allow a program to make decisions based on different conditions.

These concepts were applied to the **Quiz Game project** developed in Python. By using decision-making statements such as **if, elif, and else**, the program was able to check answers provided by users, provide appropriate feedback, and update the score accordingly.

This week helped in strengthening the understanding of how logic and decision-making work in programming.

## 2. Achievements

### 2.1 Learning Conditional Statements

- Studied Python conditional statements including **if**, **elif**, and **else**.
- Learned how programs make decisions based on user input and conditions.

### 2.2 Implementation in Quiz Game

**Project Name:** Quiz Game

- Implemented conditional statements to verify user answers.
- Developed logic to increase the score for correct answers.
- Added feedback messages such as **“Correct Answer”** or **“Wrong Answer”**.

### 2.3 Python Practice

- Practiced writing Python programs using decision-making logic.
- Improved understanding of how conditional statements control program flow.

## 3. Challenges

### 3.1 Writing Accurate Conditions

- Faced difficulty while writing conditions that correctly matched user input with expected answers.
- Resolved issues related to case sensitivity while comparing strings.

### 3.2 Debugging Program Logic

- Encountered logical errors that produced incorrect results.
- Solved these problems by testing the program multiple times and reviewing the code carefully.

## 4. Learning Resources

### 4.1 Python Documentation

- Referred to official Python documentation to understand syntax and conditional statements.

### 4.2 Online Tutorials

- Used online programming tutorials and examples to improve coding skills and understanding.

## 5. Next Week's Goals

### 5.1 Learning Python Loops

- Study **for loops** and **while loops** in Python.
- Understand how loops can repeat actions efficiently.

### 5.2 Quiz Game Enhancement

- Add multiple questions using loops.
- Improve the scoring system and program structure.
- Enhance user interaction in the quiz game.

## 6. Code Implementation

```
# Quiz Game using Conditional Statements
```

```
score = 0
```

```
print("Welcome to the Quiz Game!")
```

```
question1 = input("1. What is the capital of India? ")

if question1.lower() == "delhi":
    print("Correct Answer!")
    score += 1
else:
    print("Wrong Answer!")

question2 = input("2. What is 5 + 5? ")

if question2 == "10":
    print("Correct Answer!")
    score += 1
else:
    print("Wrong Answer!")

question3 = input("3. Which programming language are we learning? ")

if question3.lower() == "python":
    print("Correct Answer!")
    score += 1
else:
    print("Wrong Answer!")

print("Your final score is:", score)
```

## 7. Additional Comments

This week's learning significantly improved my understanding of **conditional statements and decision-making in Python programming**. Implementing these concepts in a practical project such as the Quiz Game helped strengthen my **logical thinking and debugging skills**.

Hands-on practice made it easier to identify coding mistakes and improve the overall structure of the program.
